TVU Command Center

Manage and Control All of Your TVU Solutions and Devices Anytime, Anwhere

TVU Command Center is a powerful cloud-based central management system for all of your TVU solutions. With the TVU Command Center in place, users can remotely operate and control all their TVU devices including transmitters, transceivers and receivers, and TVU Grid.

TVU Command Center's robust cloud-based tool set includes:

- Full control of TVU transmitter functions, including latency and bit-rate
- Full control of TVU receivers, including Geo-locate, a GPS-based map view of all powered TVU transmitters
- Full control over adding or removing individual supported devices
- Full control over all TVU Grid video content switching, routing and distribution
- Integration of the TVU Multiview feature for previewing six live video streams on a single monitor
- Support for TVU Analytics for full monitoring of data usage, including pre-set alerts for data usage thresholds
- Support for TVU Booking service for scheduling & automation of live video transmission

TVU Command Center also allows IP video sources to be added or deleted and transmission and output to a third party website or content delivery network (CDN) such as Akamai, YouTube Live, Ustream. Video clips from TVU transmitters can be easily downloaded and managed from a central point, and edited clips output to FTP or multiple video sources such as CDNs.
